

JKB400

Term Tech Branch Resin Joint Kit Main Cable 300mm-400mm² (3/4 Core) No Connectors Included

The Termination Technology range of branch resin joint kits are ideal for cutting and re-joining a cable whilst also branching off with a third cable. Supplied with click together moulds and two part polyurethane resin for insulation making the installation as easy as possible. Suitable for single and multiple polymeric and paper cables both stranded and solid copper/aluminium cores. The range in the part code is based on a 3/4 core cable of this size, anything with less or more cores within this range can be sized based on the joints overall diameter acceptance range. On the bigger sizes the branch cable acceptance is smaller than the main cable, in the case of using larger branch off cable a mains branch joint would be required. Joints up to and including JKB25 come complete with mechanical line tap connectors, JKB50 and above do not and are supplied separately.
